

## Quick Installation

1. Download [Free Version HTML5 LightBox](#), Unzip the downloaded file, copy or upload the folder `html5lightbox` to your web server

2. Reference the file `jquery.js` and `html5lightbox.js` which is in the folder `html5lightbox` before the `</head>` of your web page. If you already have a jQuery script in your web page, you need to add `html5lightbox.js` after your jQuery file. The minimum required version of jQuery is 1.6.

```
<script type="text/javascript" src="html5lightbox/jquery.js"></script>
<script type="text/javascript" src="html5lightbox/html5lightbox.js"></script>
```

If your website already has a jQuery, do not add the jquery.js line, only add the html5lightbox.js AFTER the existing jquery on your website:

```
<script type="text/javascript" src="html5lightbox/html5lightbox.js"></script>
```

3. Add a `class="html5lightbox"` attribute to any link tag to activate the Lightbox effect

```
<a href="images/Toronto_1024.jpg" class="html5lightbox" title="Toronto">Image</a>
<a href="images/carousel.mp4" class="html5lightbox" data-width="480" data-height="320" title="WordPress Carousel">Video</a>
```

To show a caption, you can use the `title` attribute, to define the size of a video or Flash SWF file, you can use the `data-width` and `data-height` attributes.

If you have a group of images and videos, you can use the attribute `data-group` to create a gallery. You can use `data-thumbnail` to add thumbnail navigation to the gallery.

```
<a href="images/Toronto_1024.jpg" class="html5lightbox" data-group="mygroup" data-thumbnail="images/Toronto_96.jpg" title="Toronto">Image1</a>
<a href="images/Sunrise_1024.jpg" class="html5lightbox" data-group="mygroup" data-thumbnail="images/Sunrise_96.jpg" title="Sunrise">Image2</a>
<a href="images/carousel.mp4" class="html5lightbox" data-group="mygroup" data-thumbnail="images/wordpresscarousel_120.jpg" data-width="480" data-height="320" title="Wordpress Carousel">Video</a>
```

## Easy Branding

It's easy to add an image branding to HTML5 LightBox, all you need to do is adding the following scripts to the `<head>` section of your webpage.

```
<script type="text/javascript">
  var html5lightbox_options = {
    watermark: "http://html5box.com/images/html5boxlogo.png",
    watermarklink: "http://html5box.com"
  };
</script>
```

If you don't like the link on the watermark image, you can change the code to following:

```
<script type="text/javascript">
  var html5lightbox_options = {
    watermark: "http://html5box.com/images/html5boxlogo.png",
    watermarklink: ""
  };
</script>
```

## What's New

### Version 8.2

- Fix a bug of crossfade effect
- Fix a bug when the text is placed on the left or right side of the lightbox

### Version 8.1

- Support video subtitle

### Version 8.0
